What an ATOM looks like…

This is the "planetary model"

Periodic Table

Is a chart that organizes the elements according to the number of PROTONS that the atom has this is known as the ATOMIC NUMBER

The basic difference between one element or another is that they each have a specific number of protons

Example:

Oxygen has 8 protons,

Nitrogen has 7 protons

Periodic Table

The periodic table can tell you several facts about elements:

1. **Number of protons**
2. **Chemical Symbol**
3. **Number of electrons**
4. **Number of neutrons**
5. **State or phase-at room temperature**
6. **Metal, metalloid or non-metal?**

C-notes

Periodic Table: How to….

a) To find the number of protons:

Look at the ATOMIC NUMBER

b) To find the number of electrons:

The number of electrons (for us) is equal to the ATOMIC NUMBER

Periodic Table: How to….

c) To find the number of neutrons

- **Take the atomic weight and round up or down**
- **Subtract the number of protons from the atomic weight**

Periodic Table: How to….

a) Find the number of protons:

Look at the ATOMIC NUMBER

b) Find the number of electrons:

The number of electrons (for us) is equal to the ATOMIC NUMBER
